## **Telemark Cryogenics Delivers 300+ Cryochiller Water-Trapping Systems On-time**

Telemark's cryogenic group worked long hours to build, test and ship 300+ units to a single customer during mid to late 2016 and early 2017.

The Telemark cryogenics product group is a "well oiled machine" which can produce, test and ship 10+ units per week, currently. Expansion of manufacturing space is in place for even more capacity as product demand grows.

A strict shipping schedule was in place to for this order. Out-of-the-box failure rates were non-existent.

Every system was tested thoroughly and the performance data was recorded at Telemark.

Telemark Cryochiller Units staged for shipment. Export shipping containers were loaded at the Battle Ground, WA factory for immediate dispatch to the Port of Portland or Port of Seattle.

Shipping logistics and freighter reservations were made in advance by Telemark, so the pressure to fill the containers on-time was instrumental.

Contact Telemark for your cryochiller water-trapping needs. Telemark can ship critical replacement units in less than one week. Products are proudly Made in the USA.
